Database Reference — every table, every column, with examples

22 Tables · 8 Enums · Internal B2B Electronics Store

What this system is. A private online store for a company's employees. They sign in with their work account, browse electronics, add colour variants to a basket, and place orders — fulfilled from one of several warehouses, optionally paid over several months on installment credit. Admins manage the catalogue, brands, stock, orders, promotions and credit plans, and every important action is recorded in an audit log.

How to read this. Each table has a plain **What is it?**, a short **Why / how**, a row for **every column** (meaning + example), and one full **example row**. Money is an amount plus a currency; most tables also record created/updated timestamps.

The business in one flow:

- A **product** (model) belongs to a **brand** and a **category**, and comes in **colour variants** — the variant is what you actually buy.
- Each variant has per-**stock inventory** (with cost & selling price), optional **images**, and optional dated **variant promos**.
- An employee fills a **cart**, then checkout creates an **order** with snapshotted **order items**, reserves stock, and logs **status history**.
- The order can be financed: an **order credit** agreement with a schedule of monthly **installments** (pay-in-full is a FULL credit plan).
- **Reviews** attach to products; **audit logs** record who changed what across the whole system.

Enumerations (fixed value lists)

Allowed values for the "type / status" columns used throughout the tables.

Enum	Meaning	Allowed values
entity_status	Lifecycle of a record (brands, products, ...)	ACTIVE · IN_ACTIVE · SUSPENDED · DELETED
product_availability	Storefront Order button (admin-set)	ORDER_NOW · PRE_ORDER
user_role	What a person may do	EMPLOYEE · ADMIN
order_status	Stage of an order	PENDING · CONFIRMED · PROCESSING · SHIPPED · DELIVERED · CANCELLED
movement_type	Reason for a stock change	RESTOCK · SALE · RESERVE · RELEASE · CORRECTION · TRANSFER
credit_status	State of a financing agreement	ACTIVE · COMPLETED · DEFAULTED · CANCELLED
installment_status	State of a monthly payment	PENDING · PAID · OVERDUE · WAIVED
audit_action	Kind of logged action	CREATE · UPDATE · DELETE · LOGIN · LOGOUT · STATUS_CHANGE · PRICE_CHANGE · PROMO_* · STOCK_CHANGE · ORDER_*

1 · users people

What is it? Everyone allowed into the store — employees who shop and admins who run it. Created on first SSO login.

Why / how: Mirrors the corporate directory; no separate passwords. Role decides what each person can do.

Column	Meaning	Example
id	Unique id for the person	2
ad_object_id	Link to corporate login (AD objectGUID / OIDC sub)	e3f1-77ab-...
employee_id	Staff number	EMP-1002
email	Work email (unique)	tom.nguyen@company.com
full_name	Display name	Tom Nguyen
department	Department	Sales
role	EMPLOYEE or ADMIN	EMPLOYEE
active	Access switched on?	true
created_at / updated_at	When created / last changed	2026-01-10 09:00

Example row: Tom Nguyen (EMP-1002), Sales, EMPLOYEE, active.

2 · stocks warehouses

What is it? The warehouses / locations that physically hold stock.

Why / how: Multi-warehouse: each location keeps its own quantities and prices.

Column	Meaning	Example
id	Unique id for the warehouse	1
name	Human name	Baku Warehouse
code	Short unique code	BAKU-A
location	Address / city	Baku, AZ
active	In use?	true
created_at / updated_at	When created / last changed	2026-01-05 08:00

Example row: Baku Warehouse (BAKU-A), active.

3 · categories catalog

What is it? Sections products are grouped into, like shop aisles. Can nest (a sub-section points to its parent).

Why / how: Lets employees browse by type; optional nesting supports sub-categories.

Column	Meaning	Example
id	Unique id for the category	2
name	Display name	Smartphones
slug	URL-friendly version (unique)	smartphones
description	Optional text	Phones and accessories
parent_id	Parent category, or empty if top-level	NULL
active	Shown to shoppers?	true
created_at / updated_at	When created / last changed	2026-01-05

Example row: Smartphones (slug smartphones), top-level, active.

4 · colors catalog

What is it? Master list of colours products can come in, each with a screen swatch code.

Why / how: Defined once and reused so colours stay consistent across all products.

Column	Meaning	Example
id	Unique id for the colour	3
name	Colour name (unique)	Blue
hex_code	Swatch as #RRGGBB	#3B5B92
active	Offered?	true
created_at	When created	2026-01-05

Example row: Blue (#3B5B92), active.

5 · brands catalog

What is it? Controlled list of manufacturers (Apple, Dell, Logitech). NEW table — products reference it by id.

Why / how: Avoids free-text brand drift (Apple vs apple vs APPLE) and gives the SKU a stable brand code.

Column	Meaning	Example
id	Unique id for the brand	7
name	Display name (unique)	Apple
code	Short code that feeds the SKU (unique)	APPL
status	ACTIVE / IN_ACTIVE / SUSPENDED / DELETED	ACTIVE
created_at / updated_at	When created / last changed	2026-01-05

Example row: Apple (code APPL), status ACTIVE.

6 · products catalog

What is it? The catalogue of models — name, brand, base price, specs. The general item; colour versions live in variants.

Why / how: base_price is the standard price. status = record lifecycle; availability = storefront Order button.

Column	Meaning	Example
id	Unique id for the product	11
sku	Product code (unique, system-generated)	PHN-APPL-IP15PRO-0042
name	Product name	iPhone 15 Pro
brand_id	Which brand (FK to brands)	7 (Apple)
description	Long description	Pro camera, titanium body...
category_id	Which category	2 (Smartphones)
base_price	Standard price amount	999.00
price_currency	Currency	USD
specs	Flexible JSON of tech details	{"ram_gb":8,"storage_gb":256}
status	Record lifecycle (entity_status)	ACTIVE
availability	Order button: ORDER_NOW / PRE_ORDER	ORDER_NOW
promo_price	Optional headline sale price	899.00
created_at / updated_at	When created / last changed	2026-01-06

Example row: iPhone 15 Pro (PHN-APPL-IP15PRO-0042), Apple, Smartphones, 999.00 USD, ACTIVE, ORDER_NOW.

7 · product_variants catalog

What is it? A buyable variant = a product in one colour, with its own barcode and optional own price.

Why / how: Different colours sell and run out independently. price_override blank = use the product base price.

Column	Meaning	Example
id	Unique id for the variant	501
product_id	Which model	11 (iPhone 15 Pro)
color_id	Which colour	3 (Blue)
sku	Barcode unique to this colour	IPH15P-BLU-0042
price_override	Special price, or empty to use base	NULL (uses 999.00)
promo_price	Quick current sale price (dated promos live in variant_promos)	899.00
active	Sold?	true
created_at / updated_at	When created / last changed	2026-01-06

Example row: iPhone 15 Pro - Blue (IPH15P-BLU-0042), uses base 999.00, promo 899.00.

8 · variant_promos catalog

What is it? A temporary sale price on one variant, with a date window and a label.

Why / how: Precise, dated sales on a specific item. No coupons or store-wide discounts.

Column	Meaning	Example
id	Unique id for the promo	900
variant_id	Which variant is on sale	501 (iPhone Blue)
promo_price	The sale price	899.00
start_at	When it begins (empty = now)	2026-06-01 00:00
end_at	When it ends (empty = never)	2026-06-08 23:59
label	Name shown to shoppers	Summer Sale
active	On?	true
created_at / updated_at	When created / last changed	2026-05-30

Example row: Blue iPhone at 899.00, Jun 1-8, "Summer Sale".

9 · product_images catalog

What is it? Pictures for a product. An image can belong to a specific colour variant or be shared across all.

Why / how: One image is the main thumbnail; sort_order controls display order.

Column	Meaning	Example
id	Unique id for the image	100
product_id	Which product	11
variant_id	Specific variant, or empty if shared	501 (Blue)
url	Where the file is stored	https://cdn/iphone-blue.jpg
alt_text	Accessibility description	iPhone 15 Pro in Blue
is_primary	Main thumbnail?	true
sort_order	Display order	0
created_at	When created	2026-01-06

Example row: Primary photo of the blue iPhone.

10 · credit_plans credit

What is it? The installment options the company offers (3, 6, 12 months) and their interest rate.

Why / how: Defined once and reused. "Pay in full" is itself a FULL plan row (months=1, rate=0).

Column	Meaning	Example
id	Unique id for the plan	2
name	Label shown to shoppers	6 months
months	Number of monthly payments	6
interest_rate	Rate % used to compute interest	6.00
active	Currently offered?	true
created_at / updated_at	When created / last changed	2026-01-05

Example row: "6 months" plan, 6 payments at 6.00%.

11 · product_credit_plans credit

What is it? The join table saying which products can be bought on which plans (many-to-many).

Why / how: Each row = one allowed product+plan pairing. Catalog owns this link (stores plan ids).

Column	Meaning	Example
id	Unique id for the link	40
product_id	The product	10 (Dell XPS 13)
credit_plan_id	The plan it allows	2 (6 months)

Example row: Dell XPS 13 is eligible for the 6-month plan.

12 · inventory stock

What is it? How many of each variant a warehouse holds, plus its cost and selling price there. One row per variant per stock.

Why / how: reserved = locked into placed orders; available = quantity - reserved (auto). Below threshold = low-stock alert.

Column	Meaning	Example
id	Unique id for the record	700
stock_id	Which warehouse	1 (Baku)
variant_id	Which variant	501 (iPhone Blue)
quantity	Total units physically held	12
seller_price	Price this warehouse sells at	899.00
purchase_price	What it cost to buy in	720.00
reserved_quantity	Units locked into pending orders	1
available_quantity	Free to order (generated = qty - reserved)	11
low_stock_threshold	Reorder warning line	5
updated_at	When last changed	2026-06-03

Example row: Baku: 12 blue iPhones, sells 899 (cost 720), 1 reserved, 11 available.

13 · inventory_movements stock

What is it? A logbook of every stock change in each warehouse — restock, sale, reserve, release, correction, transfer.

Why / how: Full time-stamped history of how a quantity got where it is, and who did it.

Column	Meaning	Example
id	Unique id for the entry	5001
stock_id	Which warehouse changed	1 (Baku)
variant_id	Which variant	501
change	Amount up (+) or down (-)	-1
type	RESTOCK / SALE / RESERVE / RELEASE / CORRECTION / TRANSFER	RESERVE
reference	What caused it (order no, PO, transfer)	ORD-000130
created_by	Who made the change	2 (Tom)
created_at	When it happened	2026-06-03 10:00

Example row: -1 RESERVE on blue iPhone in Baku, ref ORD-000130.

14 · carts shopping

What is it? Each employee's shopping basket (one per person).

Why / how: Temporary holder; becomes an order at checkout and is emptied.

Column	Meaning	Example
id	Unique id for the cart	200
user_id	Whose basket (unique)	2 (Tom)
created_at / updated_at	When created / last changed	2026-06-03 09:50

Example row: Tom's active basket.

15 · cart_items shopping

What is it? The lines inside a basket; each points to a specific variant.

Why / how: Same variant can't appear twice — the quantity increases instead.

Column	Meaning	Example
id	Unique id for the line	300
cart_id	Which basket	200 (Tom's)
variant_id	Which variant	501 (iPhone Blue)
quantity	How many	1
created_at / updated_at	When added / last changed	2026-06-03 09:52

Example row: 1 x blue iPhone in Tom's basket.

16 · orders

orders

What is it? Each placed order — reference number, who, fulfilling warehouse, stage, and money totals.

Why / how: Totals are frozen at checkout; discount = total promo savings; stock_id = fulfilling warehouse.

Column	Meaning	Example
id	Unique id for the order	1030
order_number	Human reference (unique)	ORD-000130
user_id	Who placed it	2 (Tom)
stock_id	Warehouse fulfilling it	1 (Baku)
status	PENDING..DELIVERED or CANCELLED	PENDING
subtotal_amount	Sum of original prices x qty	999.00
discount_amount	Total promo savings	100.00
total_amount	What the employee pays	899.00
currency	Currency	USD
placed_at	When placed	2026-06-03 10:00
created_at / updated_at	When created / last changed	2026-06-03 10:00

Example row: ORD-000130 by Tom from Baku: 999 subtotal, -100 promo, 899 total.

17 · order_items

orders

What is it? What was inside each order, one line per variant, with snapshots taken at purchase time.

Why / how: Snapshots (name, sku, colour, prices, promo) keep the order an accurate receipt forever.

Column	Meaning	Example
id	Unique id for the line	7000
order_id	Which order	1030
variant_id	Which variant	501
product_name	Name at purchase (snapshot)	iPhone 15 Pro
product_sku	SKU at purchase (snapshot)	IPH15P-BLU-0042
color_name	Colour at purchase (snapshot)	Blue
original_price	Regular price before promo	999.00
unit_price	Price actually paid per unit	899.00
quantity	How many	1
line_total	unit_price x quantity	899.00
was_promo	Sale applied?	true
promo_label	Promo name at purchase (snapshot)	Summer Sale

Example row: iPhone 15 Pro / Blue: regular 999, paid 899, Summer Sale.

18 · order_status_history orders

What is it? Every stage an order passed through, with time and who moved it.

Why / how: Keeps the whole timeline, not just the current stage.

Column	Meaning	Example
id	Unique id for the entry	9000
order_id	Which order	1030
from_status	Previous status (empty for first)	PENDING
to_status	New status	CONFIRMED
note	Optional comment	Approved by manager
changed_by	Who changed it	1 (Sara)
changed_at	When	2026-06-03 11:30

Example row: PENDING -> CONFIRMED by Sara at 11:30.

19 · order_credits credit

What is it? The financing agreement when an order is paid over time. One per order.

Why / how: Snapshots the plan terms at signing; tracks the money and a running paid total.

Column	Meaning	Example
id	Unique id for the agreement	60
order_id	The financed order (unique)	1030
credit_plan_id	Chosen plan	2 (6 months)
months	Months, copied at signing	6
interest_rate	Rate, copied at signing	6.00
principal_amount	Order total financed	1200.00
interest_amount	Total interest charged	72.00
total_payable	Principal + interest	1272.00
installment_amount	Amount due each month	212.00
paid_amount	Running total paid	424.00
status	ACTIVE / COMPLETED / DEFAULTED / CANCELLED	ACTIVE
started_at	When the agreement began	2026-06-03
created_at / updated_at	When created / last changed	2026-06-03

Example row: 6-month: 1200 + 72 = 1272, 212/mo, 424 paid, ACTIVE.

20 · installments credit

What is it? The monthly payment schedule — one row per month. Answers "which payment is paid?".

Why / how: Created in full when the agreement starts (all PENDING). Each has due date, amount, status.

Column	Meaning	Example
id	Unique id for the installment	8003
order_credit_id	Which agreement	60
sequence_no	Which month (1..months)	3
due_date	When due	2026-09-03
amount	Amount due this month	212.00
status	PENDING / PAID / OVERDUE / WAIVED	PENDING
paid_amount	How much paid against it	0.00
paid_at	When paid (empty if unpaid)	NULL
created_at / updated_at	When created / last changed	2026-06-03

Example row: Installment #3: 212.00 due Sep 3, PENDING.

21 · reviews feedback

What is it? Star ratings (1-5) and written feedback employees leave on products.

Why / how: Product level; one review per product per user.

Column	Meaning	Example
id	Unique id for the review	400
product_id	Reviewed product	11
user_id	Who wrote it	2 (Tom)
rating	Score 1-5	5
title	Headline	Great phone
body	Full text	Camera and battery are excellent.
created_at / updated_at	When written / last changed	2026-06-20

Example row: Tom rated the iPhone 5/5: "Great phone".

22 · audit_logs

audit

What is it? System-wide activity log of important actions, with before/after snapshots and device/IP.

Why / how: Security and accountability — who did what, when, and what changed.

Column	Meaning	Example
id	Unique id for the entry	12000
user_id	Who performed the action	1 (Sara)
action	CREATE / UPDATE / PRICE_CHANGE / ...	PRICE_CHANGE
entity_type	What kind of record	product
entity_id	Id of the affected record	11
old_value	Previous state (empty for CREATE)	{"base_price":999.00}
new_value	New state (empty for DELETE)	{"base_price":949.00}
ip_address	Where it came from	10.0.4.21
user_agent	Browser/app	Chrome on Windows
note	Optional description	Seasonal price cut
created_at	When	2026-06-02 14:10

Example row: Sara changed product 11 price 999 -> 949 from 10.0.4.21.
